---

Switzerland is experiencing a significant surge in solar PV energy, with solar power expected to cover more than 10% of the ...

The Swiss Solar Energy Association (Swissolar) reported, citing the Federal Office of Energy (BFE), that a record 1,641 megawatts (MW) of solar photovoltaic power capacity ...

Significantly more electricity from wind and solar power is needed to achieve Switzerland's climate targets. This is the conclusion of a new report by a Swiss research ...

A study by the Swiss Energy Foundation published in May that looks at solar and wind power production per capita in Europe ranked Switzerland 22nd, just ahead of Malta, Romania, the ...

Switzerland is experiencing a significant surge in solar PV energy, with solar power expected to cover more than 10% of the country's total electricity demand for the first time in ...

The 2025 tender is expected to significantly boost Switzerland's solar capacity, bringing the country closer to its renewable energy goals. This move is a strategic investment ...

Approximately 320 megawatts were generated in 2014, bringing the total installed capacity to 1,076 MW and allowing Switzerland to join the group of twenty countries with a solar gigawatt ...

Explore Switzerland's renewable energy strategy. See how ambitious solar goals, government support, and alpine projects pave the way to a sustainable future.

This report outlines Switzerland's strong progress toward its national energy strategy goals, with record-breaking PV installations in 2023 and a favourable policy environment.

The Swiss Solar Energy Association (Swissolar) reported, citing the Federal Office of Energy (BFE), that a record 1,641 megawatts ...

Explore Switzerland's renewable energy strategy. See how ambitious solar goals, government support, and alpine projects pave the ...

The higher the winter electricity production, the more the solar PV panel can contribute to securing a reliable supply and to reducing electricity imports in Switzerland.
