-----

Due to the increasing microgrid group and shared energy storage integration into active distribution network (ADN), it is necessary to effectively coordinate these complexity ...

A multi-objective optimization method for energy storage optimization in active distribution networks with multiple microgrid is proposed to address the low utilization of renewable energy ...

Simulation and case analysis show that the algorithm can stably achieve optimized configuration, stable frequency regulation, and reduce carbon emissions of the energy storage ...

Firstly, the method uses the sensitivity standard deviation of network loss and Manhattan distance similarity to determine the quantity and location of energy storage access.

This chapter starts by introducing the various energy storage systems, followed by the physical model for the optimal dispatching of active distribution networks (ADNs).

Simulation outcomes for an enhanced IEEE 33-node system show that coordinated operation of source-network-load-storage effectively reduces intraday active power loss, ...

Aiming at prominent voltage quality problems in AC/DC hybrid distribution networks with a high proportion of distributed energy and diversified loads, this paper ...

This paper proposes a complementary reinforcement learning (RL) and optimization approach, namely SA2CO, to address the coordinated dispatch of the energy ...

In recent years, with the rapid development of renewable energy, the penetration rate of renewable energy

generation in the active distribution network (ADN) has increased. ...

In this study, an optimal planning model of MES is established for ADN with a goal of minimising the annual cost of a distribution system.
