In contrast to stationary storage and generation which must stay at a selected site, bidirectional EVs employed as mobile storage can be mobilized to a site prior to planned outages or arrive ...

In contrast to stationary storage and generation, which must stay at a selected site, bidirectional EVs employed as mobile storage can be mobilized to a site prior to planned ...

The objective of the present report is to assess Armenia's legal and regulatory framework for energy storage and provide recommendations for reforms that would be needed to ...

The German Economic Team is financed by the Federal Ministry for Economic Affairs and Energy (BMWE). Berlin Economics is commissioned with the project implementation.

Instead of just consuming electricity, electric vehicles can actively contribute to grid stability through bidirectional charging. They store surplus energy - from renewable sources, for ...

If storage is considered an energy consumer for taxation purposes, energy offtake by storage will constitute a taxable event. Subsequently, the discharge energy will be taxed once again when ...

Creation and use of a techno-economic model to analyse the Armenian electricity system and determine cost-optimal deployment of battery energy storage system (BESS)

With the interconnection project with Iran nearing completion, thus reducing the need for larger storage capacities, deploying a 30 MW-4h BESS would strengthen Armenia's grid and mitigate ...

This report analyzes the economic and financial viability of battery storage solutions to ensure the reliable and

Armenia's mobile energy storage container with bidirectional charging
