The focus was on phase change materials (PCM energy storage systems) and thermochemical heat accumulators (TCM). The project included material development, characterisation and ...

A study 1 carried out by the University of Applied Sciences Technikum Wien, AEE INTEC, BEST and ENFOS presents the market development of energy storage technologies in Austria for ...

Austria's 25-degree temperature differential isn't an obstacle - it's becoming the catalyst for Europe's most innovative energy storage ecosystem. With proper thermal management and ...

In this issue, we present several pioneering Austrian projects on heat storage technologies and report on the involvement of Austrian experts in the International Energy Agency's technology ...

Phase change energy storage materials (PCESM) refer to compounds capable of efficiently storing and releasing a substantial quantity of thermal energy during the phase ...

Austria can achieve a fully decarbonized electricity system with strategic storage planning. This paper presents three scenarios (policy, renewables and electrification and ...

The Masterplan gives a description of the activities that need to be undertaken to arrive at a substantial contribution of thermal energy storage technologies to the renewable energy ...

Functional phase change materials (PCMs) capable of reversibly storing and releasing tremendous thermal energy during the isothermal phase change process have recently ...

This innovative thermal energy storage solution promotes environmental sustainability and is applied in

Austrian phase change energy storage products
