-----

Developers and power plant owners plan to significantly increase utility-scale battery storage capacity in the United States over the next three years, reaching 30.0 gigawatts (GW) by the ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. battery storage already achieved record ...

Currently, Texas and California lead on battery storage deployment, but other states are poised for significant growth as well. ...

Mainland China remains the largest market, fueled by requirements that new wind and solar installations include storage. However, a February 2025 policy shift will move wind ...

We foresee a more dynamic battery energy storage system project execution pace in 2025 with FERC's Order No. 2023 and approval of the cluster study process that will ...

Currently, Texas and California lead on battery storage deployment, but other states are poised for significant growth as well. "Now more than ever, we have the ability to harness ...

Demand for energy storage continues to escalate, the global battery energy storage (BESS) landscape is poised for significant installation growth and technological ...

Battery industry breakthroughs in 2025 reshaped cost, chemistry, software, and scale, setting a disciplined roadmap toward terawatt maturity.

In this report, our lawyers outline key developments and emerging trends that will shape the energy storage market in 2025 and beyond.

Battery energy storage systems (BESS) are rapidly reshaping the energy landscape across the United States. As these systems become a critical component of ...

The global energy storage market is poised to hit new heights yet again in 2025. Despite policy changes and uncertainty in the world's two largest markets, the US and China, ...
