Summary A new aggressive flu strain, H3N2 subclade K, is spreading across the U.S., causing severe symptoms like fever, fatigue, and cough. Learn where it's hitting hardest ...

Other symptoms include a high fever, chills, headache, sore throat, a runny nose, fatigue and a cough. A new variant of flu has caused a surge in cases across America.

Typical influenza in adults is characterized by sudden onset of chills, fever, prostration, cough, and generalized aches and pains (especially in the back and legs).

The variant seems to differ from prior strains of the flu, with heightened versions of typical symptoms like fever, chills, headache, fatigue, cough, sore throat and runny nose.
