-----  
Are green cellular base stations sustainable?

This study presents an overview of sustainable and green cellular base stations (BSs), which account for most of the energy consumed in cellular networks. We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the past decade.

Do 5G communication base stations have multi-objective cooperative optimization?

This paper develops a method to consider the multi-objective cooperative optimization operation of 5G communication base stations and Active Distribution Network (ADN) and constructs a description model for the operational flexibility of 5G communication base stations.

How can mobile network architecture contribute to green networking?

The representation of the mobile network architecture along with the expanded view of the 5G base station has been depicted in Fig. 5. Improving hardware components can contribute toward green networking. It entails reducing BS's energy consumption by using energy-efficient hardware.

Can communication and power coordination planning improve communication quality of service?

Our study introduces a communications and power coordination planning (CPCP) model that encompasses both distributed energy resources and base stations to improve communication quality of service.

Therefore, this chapter aims to provide an overview of green 5G base stations, exploring their construction in China, their environmental impact, and the various factors and ...

This paper develops a method to consider the multi-objective cooperative optimization operation of 5G communication base stations and Active Distribution Network ...

Regional communication base station planning scheme based on high traffic demand of Winter Olympic Games [J]. Telecommunications Science, 2020, 36 (10): 140-146.

The green base station solution involves base station system architecture, base station form, power saving

technologies, and application of green technologies. Using SDR-based ...

In this paper, considering the cost of base station, coverage, call quality, and other practical factors, a multi-objective optimal site planning scheme is proposed.

Various green communication approaches such as BS hardware improvement, sleep mode technique, radio transmission, deployment and network planning (UAV-based) and energy ...

Our study introduces a communications and power coordination planning (CPCP) model that encompasses both distributed energy resources and base stations to improve ...

One key measure to mitigate emissions has been through the development of Green Base Stations, covering: 1. Deployment of new energy-saving technologies: The ...

We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the past decade.

In this article, a robust RL-based multicells sleeping model called graph deep deterministic policy gradient (GDDPG) is developed for handling highly complex communication scenarios. ...
