Why are base station towers important in Ireland?

The rapid expansion of mobile telephone services in Ireland has required the construction of base station towers in urban and rural areas across the country. These base station towers are an essential feature of all modern telecommunications networks.

How do base stations work in Ireland?

The base stations are connected by means of leased lines, radio, optic fibre, coaxial cable, etc. to an exchange system which allows communications into the fixed network or onwards to other mobile phone users. At present there are two systems in operation in Ireland - analogue and digital.

What is effective telecommunications tower site selection?

Effective Telecommunications tower site selection is key to successful network architecture and design. Our national tower network offers strategic urban and rural locations to support network expansion and technology rollout for mobile and wireless communications operators.

Does Esat Digifone offer mobile phone services in Ireland?

Following a competitive application process the Government has issued a licence to Esat Digifone to provide GSM (global systems for mobile) mobile telephone services. Eircell, a subsidiary of Telecom Eireann, already provides mobile telephone services (both analogue and digital) in Ireland.
