-----  
What is the EU doing about solar energy?

The EU is also cooperating with the International Solar Alliance to disseminate its experience in solar energy technologies, policies and practices. With the International Energy Agency, the EU will also prepare zero-emission energy roadmaps for just and socially fair transitions in countries dependent on coal.

5. Conclusions

Should solar energy be used for heating in Europe?

Solar energy systems have long been a low-cost and reliable solution for heating in many European countries 6 but overall solar heat accounts for just around 1.5% of heating needs 7. To reach the EU 2030 targets, energy demand covered by solar heat and geothermal should at least triple.

How much solar energy does the EU need?

Over this decade, the EU will need to install, on average, approximately 45 GW per year. Solar energy systems have long been a low-cost and reliable solution for heating in many European countries 6 but overall solar heat accounts for just around 1.5% of heating needs 7.

How much solar energy will the EU install in 2025?

Sign up here. The EU is on track to install 64.2 gigawatts of new solar energy capacity in 2025, a 1.4% fall from the 65.1GW installed last year, industry association SolarPower Europe said. "There's a kind of paralysis.

The EU large-scale skills partnership for onshore renewables, including solar energy, will turn the growing bottleneck in the skilled workforce needed to manufacture, deploy and maintain solar ...

BRUSSELS/BERLIN, July 24 (Reuters) - The European Union's expansion of solar energy is on track for its first annual slowdown in more than a decade, industry data showed on Thursday, ...

The European Solar Charter, signed on 15 April 2024, sets out a series of voluntary actions to be undertaken to support the EU photovoltaic sector.

In 2023 alone, solar investments surged by nearly 40% across the EU, led by aggressive incentive programs in Germany, the Netherlands, and France--while other regions lagged ...

The EU has doubled its solar capacity in the last three years. How have subsidies made this possible, what support is still available, ...

BRUSSELS/BERLIN, July 24 (Reuters) - The European Union's expansion of solar energy is on track for its first annual slowdown in more than a ...

The EU large-scale skills partnership for onshore renewables, including solar energy, will turn the growing bottleneck in the skilled workforce needed to ...

While existing residential buildings can greatly benefit from adding a solar installation, the directive does not require solar installations on such ...

The EU has doubled its solar capacity in the last three years. How have subsidies made this possible, what support is still available, and what still needs to happen?

The EU has doubled its solar capacity in the last 3 years. DW and the European Data Journalism Network have analyzed how subsidies made this possible, what supports are ...

The European Solar Charter, signed on 15 April 2024, sets out a series of voluntary actions to be undertaken to support the EU ...

For solar companies, installers, and EPCs, staying on top of solar energy policies in Europe isn't optional anymore--it's critical for compliance, financing, and future growth. ...
