How do I add solar panels to my existing system?

If you want to add solar panels to your existing system, the first step is to contact your original installer or another certified PV professional. During your consultation, you can determine which upgrades will be necessary to accommodate the new panels. Is it worth adding more solar panels?

Can a small Solar System expansion increase net metering rates?

But in states like California, among others, where NEM 3.0 or a net billing tariff is in place for new solar installations, homeowners locked into NEM 1.0 or NEM 2.0 can increase the benefits of their existing net metering rates with a small PV system expansion--though it can be no more than 1 kW or 10% of your existing system size.

How much does it cost to add more solar panels?

The cost of adding extra solar panels varies based on several factors, including the number of panels, the installation's complexity, and if any other upgrades are required. Additional solar capacity typically costs between \$800 and \$1,600 per panel, though every project is different.

Should I add more solar panels?

If there's enough available installation space, the cost of adding extra panels may be beneficial to maximize your long-term savings, energy independence, and environmental impact with more solar capacity.
