1. Introduction: Review the definition of gravity Drop a ball and explain why it falls downward Explain that the strength of a gravitational pull is determined by the masses of the objects ...

Gravity waves are a real challenge because they are largely invisible to climate and weather models. The crux of the problem is the way satellites see them.

A new satellite mission sheds light on Earth's gravity field and provides clues about changing sea levels.

Glaciers Are Solid Rivers A glacier is a large accumulation of many years of snow, transformed into ice. This solid crystalline material deforms (changes) and moves.

Gravity is not constant across Earth, and the amount of force exerted by gravity changes with changes in mass. These uneven mass distributions influence satellite ...

Data from NASA satellite observations provide information about Earth's mean gravity field and inform monthly maps of the time-variable gravity field, both of which are useful ...

To account for gravity and other effects in their equations, the scientists used a model of Earth's gravitational field, based on data from the GRACE satellite mission. The ...

Gravity causes the last of the star's matter to collapse inward and compact. This is the white dwarf stage which is extremely dense. White dwarfs shine with a white hot light but once all of their ...

Newton's "law" of gravity is a mathematical description of the way bodies are observed to attract one another, based on many scientific experiments and observations. The gravitational ...
