What size inverter do I Need?

You need an inverter rated for at least 1694.12 W, which you should round up to the next available size (e.g., 1800 W inverter). What Is a Safety Factor?

What are the different solar inverter sizes?

Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly. During our research, we discovered that most inverters range in size from 300 watts up to over 3000 watts. In this article, we guide you through the different inverter sizes.

How to calculate inverter size?

Using the Inverter Size Calculator is quick and easy. You'll need three inputs: Total Wattage (W): This is the total power consumption of all the appliances or devices you plan to run through the inverter. Safety Factor: A multiplier to ensure some buffer above your actual power requirement. Typically ranges from 1.1 to 1.5.

How many Watts should an inverter be?

Ideally at 80-110%, to compensate for panel overproduction in bright sunlight and to avoid compromising inverter efficiency. 2. Select an Appropriate Inverter Rating Here's how inverter sizes usually correlate:
Panels: 3,000-6,000W Inverter: 3,000W to 5,500W
Panels: 6,000-10,000W

How Big of an Inverter Do I Need? Finding the proper inverter size for your needs is as simple as adding together the necessary wattages of the items that you're looking to power.
