What is the Kingston energy complex?

TVA is building what it calls the Kingston Energy Complex, a combination of 1,550 megawatts of natural gas, 100 megawatts of batteries and up to four megawatts of solar panels. The complex next to the existing coal plant in Roane County will generate enough electricity for around 900,000 homes.

Will Kingston coal fired power plant be replaced by natural gas?

Kingston coal fired power plant, seen in 2008 after major coal ash impoundment spill, would be replaced by 1.5GW natural gas power plant under TVA plan. Photo: TVA

What will happen at the Kingston gas plant?

At the Kingston site, about 40 miles west of Knoxville, the gas plant will be joined by 100 megawatts of grid-level battery storage and 3 to 4 megawatts of solar generation in a first-of-its-kind complex for TVA. Eventually, the towering and aging stacks will have to come down and the silhouette of Kingston will change dramatically.

Will TVA replace the Kingston Coal Plant?

TVA's energy complex of gas and batteries is replacing the Kingston coal plant. See the progress The Tennessee Valley Authority is constructing what it calls the "Kingston Energy Complex" to replace the coal plant mostly with natural gas. The Kingston plant opened in 1955 as the world's largest coal-fired plant, and it has a complicated history.

While the utility has an active interconnection queue of close to 30 GW, more than half is for solar and storage, and TVA recognizes a "significant portion" may be non-viable.

The 70-year-old, nine-unit Kingston coal plant, which was the world's largest coal fired plant when it began operating, would be ...

The gas plant will be part of a new energy complex. TVA plans to add 100 megawatts of battery storage and up to 4 megawatts of solar power to the site later on.

A workhorse of TVA's system and a major employer in Roane County since 1955, the plant's twin 1,000-foot smokestacks stand just off Interstate 40 as it crosses the Clinch River.

TVA is building what it calls the Kingston Energy Complex, a combination of 1,550 megawatts of natural gas, 100 megawatts of batteries and up to four megawatts of solar ...

While the utility has an active interconnection queue of close to 30 GW, more than half is for solar and storage, and TVA recognizes a ...

To replace that generation, TVA will build an energy complex that will house at least 1,500 megawatts of combined cycle and dual-fuel ...

TVA is building what it calls the Kingston Energy Complex, a combination of 1,550 megawatts of natural gas, 100 megawatts of batteries and up to four megawatts of solar ...

The Tennessee Valley Authority is expected to retire its nine-unit, coal-fired Kingston Fossil Plant by 2027 and replace it with a natural gas-fired plant, solar and battery ...

This includes the historic Kingston Fossil Plant, once the largest coal plant on earth. It will be retired in 2027 and replaced by a 1.5 ...

This includes the historic Kingston Fossil Plant, once the largest coal plant on earth. It will be retired in 2027 and replaced by a 1.5-GW complex made up of a combined ...

The 70-year-old, nine-unit Kingston coal plant, which was the world's largest coal fired plant when it began operating, would be demolished when the new facility opens in late ...
