How many amps does a 12V 2000W inverter draw?

A 12V 2000W inverter running at maximum load draws 166.6 amps an hour. Divide the watts consumed per hour by the voltage and you get the amps. In this example, 2000 watts an hour divided by 12 volts equals 166.6 amps. The following calculations assume you have a high quality inverter that can draw maximum power.

How much power does a 2000 watt inverter use?

In an emergency, a 2000 watt power inverter can sustain the necessities of your home during a power outage. Example: TVs and Entertainment Systems: Most of the flat-screen TVs available today generally consume between 50 and 400 watts of power, which depends on its size and the technology used.

Can a 2000 watt inverter run on a 12 volt battery?

If your 2000W inverter is running on a 48V battery bank, the fuse or circuit breaker should be rated at 70-80 Amps. If your 2000 Watt inverter is rated for 12VDC, you could use a 225 Amp fuse or circuit breaker, but only if the battery's low voltage cut-off point is set to 12 Volts (as opposed to 10 Volts).

How much power does a 12V inverter use?

A typical 12V inverter with 2000 watt power inverter requires approximately 167 amps per hour. If you are using a high-power appliance such as a microwave or air conditioner, you may need to connect multiple batteries in parallel to boost capacity.
