-----  
How much wind power does Europe have?

Wind power continues to play a crucial role in Europe's energy landscape, with total installed capacity now reaching 285 GW. Of this, 248 GW comes from onshore wind and 37 GW from offshore installations. Within the EU-27, the total installed capacity stands at 231 GW, with 210 GW generated onshore and 21 GW offshore.

How much wind power will Europe install in 2025?

The EU-27 accounts for 231 GW of the total installed capacity, 210 GW onshore and 21 GW offshore. We expect Europe to install 187 GW of new wind power capacity over 2025-2030. The EU-27 should install 140 GW of this - 23 GW a year on average. This would bring total installations in Europe and the EU to 450 GW and 351 GW respectively by 2030.

How many wind farms are there in Europe?

This product is a database of wind farms in Europe and includes 27621 entries (in 40 countries). Its content represents 243,5 GW onshore and 502,6 GW offshore. Onshore market:

How much wind power will Europe have in 2024?

As of 2024, the EU's wind capacity and generation remain on an upwards trend. WindEurope (formerly known as The European Wind Energy Association) has estimated that 230 gigawatts of wind capacity will be installed in Europe by 2020, consisting of 190 GW onshore and 40 GW offshore.

Discover Europe's most comprehensive wind farm database! Featuring 27,621 entries across 40 countries, it details 243.5 GW onshore and 502.6 GW offshore.

Wind power continues to play a crucial role in Europe's energy landscape, with total installed capacity now reaching 285 GW. Of this, 248 GW comes from onshore wind and 37 ...

What is the share of wind energy in the energy mix? How many wind turbines are there in Europe? And what materials are wind turbines made of? Immerse yourself in the new ...
