This study evaluates the feasibility and performance of a solar-assisted absorption cooling system designed for the climatic conditions of three major Libyan cities: Tripoli, Benghazi, and Misrata.

Our technologies range from solar air conditioning to power-efficient energy storage systems (BESS) to solar air conditioning technologies. Explore and discover more.

The aim of this study is the evaluation of the economic and technical viability for the installation of a solar air conditioning system based on parabolic solar concentrators and ...

Abstract- The aim of this study is the evaluation of the economic and technical viability for the installation of a solar air conditioning system based on parabolic solar concentrators and ...

The aim of this study is the evaluation of the economic and technical viability for the installation of a solar air conditioning system ...

ABSTRACT: In this paper, the principles of the operation of an adsorption cooling circuit and its operating points are analyzed through both a thermodynamic analysis and with mathematical ...
