The CAES project is designed to charge 498GWh of energy a year and output 319GWh of energy a year, a round-trip efficiency of 64%, but could achieve up to 70%, China Energy said. 70% ...

Let's cut to the chase: Oslo builds largest energy storage station, and it's not just another infrastructure project. This 1.2 GWh behemoth, set to power 180,000 homes during ...

Oslo's setup combines liquid metal battery arrays with compressed air storage - a pairing that's sort of like having both sprinters and marathon runners on your energy team.

Fortum Oslo Varme joined us for a chat on their plans to implement the first full-scale carbon capture and storage project capturing flue gas CO₂ from a waste-to-energy plant.

The Klemetsrud CO₂ capture and storage project by 2026 will be the world's first waste-to-energy plant with full-scale CCS. The Bellona Foundation has worked on this project with Oslo and ...

It aims to grasp the strategic window period of the development of new energy storage in the 14th five year plan, accelerate the large-scale, industrialized and market-oriented development of ...

The Fortum Oslo Varme project will equip an existing waste-to-energy plant with a carbon capture facility. The project will capture 90% of the 400,000 tonnes of CO₂ the plant emits each year.

Liquid air energy storage (LAES) is becoming an attractive thermo-mechanical storage solution for decarbonization, with the advantages of no geological constraints, long lifetime (30-40 years), ...

Ever wondered how a city known for fjords and northern lights is quietly becoming a global energy storage pioneer? The Oslo Grid Energy Storage Project is rewriting the rules ...

Oslo leverages abandoned mines and natural caverns for pneumatic energy storage. Here's the kicker: when excess renewable energy (like wind or hydropower) is available, it compresses ...
