-----

In recent years, researchers make efforts to use renewable energies as a power source for WSN such as the solar energy, wind, thermal, vibration and RF. Several ...

This paper presents a comprehensive and systematic literature review (SLR) that critically examines the latest advancements ...

This paper presents a comprehensive and systematic literature review (SLR) that critically examines the latest advancements and methodologies in energy harvesting for ...

This article starts by furnishing a detailed analysis of different energy harvesting methodologies, incorporating solar, thermal, kinetic, ...

This paper introduces a wireless communication system for CSP fields based on the Integrated Access and Backhaul (IAB) technology, a distributed resource management ...

High global growth in solar energy technology applications has added more weight in operations and maintenance (O& M) of solar-photovoltaic (SPV) systems. SPV reliability and ...

To control the energy consumption and achieve a longer lifetime, we built a model to describe the energy status of the sensor node and used suitable methods for harvesting prediction, shadow ...

This research paper explores the development of energy harvesting technologies explicitly designed to address the energy constraints of WSNs.

The text provides a comprehensive assessment of diverse technologies, techniques, and mechanisms for

extracting energy from environmental sources, including thermal, light, ...

WSNs were inspired by technological emphases, such as conserving natural resources and changing them into energy. Characteristically, the WSN nodes are usually ...

The data collected allows us to minimise the energy consumption especially in days where renewable energy is not available, it also enables us to maximize the wireless sensor network ...

This article starts by furnishing a detailed analysis of different energy harvesting methodologies, incorporating solar, thermal, kinetic, and radio frequency (RF) energy, and ...
