-----  
How much power does a 2KW Solar System produce?

Our 2 kW solar systems feature DIY solar kits, which will produce at least 2kW (or 2,000 watts) of power. This translates to approximately 175 to 375 kilowatt-hours (kWh) per month depending on your system choice, location and other factors. Choose between a 2kW solar kit with microinverters and a 2.4kW off-grid kit.

How much space does a 2KW Solar System need?

A 2kW solar kit from GoGreenSolar requires about 107 square feet of space. Solar panels with microinverters allow you to place panels in various locations, directions and angles on your roof. This choice will offer you more flexibility if space is at a premium.

How much solar can a 20 foot container hold?

20 foot containers can expand from 3,000W of solar up to 6,000W. 40 foot containers can expand from 3,000W up to 12,000W of solar in the future. We love the strategically placed solar panels on top of the container roof - we've accomplished this secure mounting with our field tested RPS Scalable Ground Mount.

Can a containerized Solar System be installed off-grid?

Off-Grid Installer have the answer with a containerized solar system from 3 kw up wards. Systems are fitted in new fully fitted containers either 20 or 40 foot depending on the size required.

Our 20 and 40 foot shipping containers are outfitted with roof mounted solar power on the outside, and on the inside, a rugged inverter with power ready battery bank.

Our 2 kW solar systems feature DIY solar kits, which will produce at least 2kW (or 2,000 watts) of power. This translates to approximately 175 to 375 kilowatt-hours (kWh) per month depending ...

These 2kW off-grid solar packages are perfect for small spaces. Easily expandable with more solar panels and batteries to fit your growing energy needs.
