Now, Swiss scientists have harnessed solar power to generate temperatures exceeding 1,000 degrees Celsius (1,830 degrees Fahrenheit), a huge milestone in our quest to ...

In the future solar energy could be used to produce cement or steel, instead of burning coal or oil for this purpose. Researchers at ETH Zurich have developed a thermal trap ...

Concentrated solar power (CSP), also called concentrating solar power or concentrated solar thermal, involves systems that collect solar heat for multiple purposes like cooking, ...

Researchers have previously explored a clean-energy alternative using solar receivers, which concentrate and build heat with thousands of sun-tracking mirrors. But that ...

Researchers have explored a clean-energy alternative using solar receivers, which concentrate and build heat with thousands of sun-tracking mirrors. However, this ...

Solar energy has long been associated with clean electricity generation through the use of blue panels. However, solar power also has the potential to provide extreme heat, ...

In the future solar energy could be used to produce cement or steel, instead of burning coal or oil for this purpose. Researchers at ETH ...

Researchers have explored a clean-energy alternative using solar receivers, which concentrate and build heat with thousands of sun-tracking mirrors. However, this technology has difficulties ...

Researchers at ETH Zurich have developed a method to generate heat exceeding 1,000 degrees Celsius using

solar power. This innovation could replace fossil fuels in energy-intensive ...

This method, detailed in a recent proof-of-concept study, uses synthetic quartz to harness solar energy, offering a clean energy alternative for carbon-intensive industries.

Energy storage is essential to a resilient grid and clean energy system. Learn about the types of energy storage, available incentives, and more.
