Whether you're interested in residential solar panels, commercial solar panel grants, or hybrid solutions that combine wind and solar, we offer tailored support from planning ...

By building solar farm projects in Kuldiga, Tukums and Bauska municipalities, the company will be able to provide green energy to almost 200,000 Latvian households.

Latvia's renewable energy generation capacities from 2017 to 2022. However, generation capacities for wind and solar power, are currently very small.

Covering 110 hectares, the solar farm is equipped with 156,000 solar panels of a 94 megawatt (MW) total installed capacity. Its annual renewable generation will power more than ...

Creating new solar farms will reduce emissions from fossil fuel-based electricity generation and is a vital step towards a green transition and energy independence. The Nordic ...

Since the start of the support program almost three years ago, around 13,000 renewable energy installations have been purchased and installed in Latvia with state support ...

Solar generation capacity is growing steadily, with a high number of microgenerator permits issued. Smart meter penetration is at 98%, but grid tariff increases in 2023 led to government ...

The number of households in Latvia generating their own electricity continues to grow, with solar panels being the primary choice of generation equipment (micro-generators).

The Varne solar farm, which is 100% owned by Ignitis Renewables, represents a milestone for the company and for the Latvia solar market. Construction of the facility began in ...
