How can Switzerland achieve a stable and reliable energy supply?

As Switzerland moves away from fossil fuels, ensuring a stable and reliable energy supply --especially during winter months when solar and hydroelectric output is lower--remains a challenge. Solutions include cross-border energy partnerships with European countries and investments in energy storage technologies. 2.

Public and Private Investment

What is Switzerland doing with pumped-storage hydropower?

The government is developing new pumped-storage hydropower facilities, which act as massive "batteries" by storing excess electricity for later use. Switzerland is rapidly scaling up solar energy, with new laws requiring solar panels on all new buildings.

What is the Coalition for green energy & storage (CGES)?

This initiative was founded by the ETH Domain. The founders ETH Zurich, EPFL, PSI and Empa launched the Coalition for Green Energy & Storage (CGES) in 2023 as the first joint initiative to face the energy crisis in 2023.

Does Switzerland need a hydropower plant?

Hydropower already supplies over 55% of Switzerland's electricity. Investments in modernizing hydroelectric plants and improving storage capabilities will further enhance efficiency and reliability. The government is developing new pumped-storage hydropower facilities, which act as massive "batteries" by storing excess electricity for later use.

The new professorship "Electrical Energy Storage Systems" seeks to develop advanced storage technologies that will enable a reliable and sustainable energy supply.

Investments in modernizing hydroelectric plants and improving storage capabilities will further enhance efficiency and reliability. The government is developing new pumped ...

Energy Vault has launched its FlexGrid energy storage system in Switzerland, securing contracts with

Schindler Group and Energie Wettingen AG. A 2 MW/2-hour system is ...

The new professorship "Electrical Energy Storage Systems" seeks to develop advanced storage technologies that will enable a reliable and sustainable ...

Battery energy storage PCS solution for EKZ, one of Switzerland's largest energy companies BESS 1 MW / 250 kWh PCS solution at the Dietikon Power Plant in Zurich, Switzerland.

Trade body Swissolar has called for a national energy storage strategy to support the rising popularity of home solar-plus-battery systems in the country. In Switzerland, roughly ...

The CGES public-private platform enhances the stability, security, and resilience of the Swiss energy system by supporting the development of green storage through scalable demonstrator ...

Trade body Swissolar has called for a national energy storage strategy to support the rising popularity of home solar-plus-battery ...

The study examines the need and role of energy storage in Switzerland for the years 2035 and 2050, aiming to analyze their contribution to the flexibility, stability, and security of the energy ...

As the Alpine glaciers slowly melt away, Switzerland will have the opportunity to build new dams and artificial lakes in the mountains. This will increase energy storage capacity ...

So there you have it - Switzerland's energy storage landscape in 2025 isn't just about electrons in boxes. It's a wild ride of innovation where precision engineering meets ...

With the Zurich Energy Storage Project 2024, the country takes another leap toward achieving its 2050 net-zero targets. This project focuses on large-scale battery storage systems designed to ...
