This is a list of energy storage power plants worldwide, other than pumped hydro storage. Many individual energy storage plants augment electrical grids by capturing excess electrical energy during periods of low demand and storing it in other forms until needed on an electrical grid. The energy is later converted back to its electrical form and returned to the grid as needed.

With global energy storage capacity projected to hit 1.2 TWh by 2030 [3], the Wellington facility isn't just big - it's strategically big. Here's what makes it click-worthy:
