Functions assign a single output for each of their inputs. In this video, we see examples of various kinds of functions.

What are rational functions? What is their domain and range? We break down the definition of the function given in set-builder form and plot the graph ...

In this unit, we learn about functions, which are mathematical entities that assign unique outputs to given inputs. We'll evaluate, graph, analyze, and create various types of functions.

This topic covers: - Evaluating functions - Domain & range of functions - Graphical features of functions - Average rate of change of functions - Function combination and composition - ...

Using function notation to describe rules (part 1) Learn Worked example: Evaluating functions from equation

About this unit A function is like a machine that takes an input and gives an output. Let's explore how we can graph, analyze, and create different types of functions. Unit guides are here!

A function is like a machine that takes an input and gives an output. Let's explore how we can graph, analyze, and create different types of functions.

An introduction to multivariable functions, and a welcome to the multivariable calculus content as a whole. Created by Grant Sanderson.

Equations and functions are not the same thing, but they can be related in several ways. Watch Jesse Roe and Sal talk about the difference between equations and functions.
