-----

Solar and wind remain the most competitive sources of electricity on an unsubsidized basis in the United States, despite persistent low natural gas prices, according to ...

New York/ London, February 6, 2025 - The cost of clean power technologies such as wind, solar and battery technologies are expected to fall further by 2-11% in 2025, breaking last year's ...

In states without policies to drive renewable energy, power prices could surge as federal tax incentives for clean energy disappear, according to Energy Innovation, a think tank.

The falling costs of three key technologies deployed in global energy markets over the past few decades -- solar photovoltaics (PV), battery energy storage, and wind turbines -- ...

Solar and wind remain the most competitive sources of electricity on an unsubsidized basis in the United States, despite ...

In states without policies to drive renewable energy, power prices could surge as federal tax incentives for clean energy disappear, ...

Renewable executives say blocking solar and wind projects will worsen a power supply shortage, harming the grid and leading to higher prices. The industry is facing difficulty ...

The cost of clean power technologies, including wind, solar, and battery storage, is projected to decrease further in 2025, continuing the trend of record-breaking cost reductions.

As more renewables are plugged into the grid, electricity prices are likely to dip below zero more often in the coming years -- unless battery storage grows to absorb more of ...

POLITICO's analysis of U.S. Energy Information Administration power price data contradicts arguments by President Donald Trump and his appointees that a heavy ...

Countries across Europe have invested heavily in wind and solar energy projects in recent decades as the price of these clean energy sources has decreased in line with the ...

The falling costs of three key technologies deployed in global energy markets over the past few decades -- solar photovoltaics (PV), ...
